

## **Carbon Management Module**

A consultant provided by Sustainability Advantage assisted us work through the Carbon Management module.

As a result of this module, Mercy Services:

- Refined our environmental audit – to include Greenhouse Gases from gas escaping from air conditioners; made an adjustment for the difference in Greenhouse Gases depending on the ethanol content of fuel used;
- Utilised an electronic calculator supplied by the consultant to help make/check our Greenhouse Gas calculations.
- Recalculated the 2010-2011 Greenhouse Gases emissions to enable a fair comparison with subsequent years.
- The consultant provided a workshop for the Mercy Services Environmental Responsibility workgroup on carbon calculation and management strategies.
